PHP Application Server that Works for You Description: appserver.io is a PHP web application server which was developed from scratch with an emphasis on the needs of PHP web developers. With this server you don't need to install an additional web server. appserver.io is an application server designed specifically for PHP web developers, and is designed to work with PHP 7.x. appserver.io features: whip up ultra-fast web apps effortlessly without bloated frameworks distribute as a single zip file let you use the tools you already

09e8f5149f

appserver.io is a powerful application server for PHP programming. It is built upon the same technology (PHP) as the Drupal, WordPress and Joomla, but provides the advantages of an Apache server. appserver.io Community Edition Overview: appserver.io Community Edition is the version appserver.io allows you to build a website as a standalone application. Hence, you no longer need to install an additional web server, just start Apache from your

XAMPP environment and you have a website as a standalone application within 30 seconds. appserver.io Community Edition Infrastructure: appserver.io Community Edition runs on a fully compatible version of the PHP/5.3/MySQL 5.1/Apache 2.2/PHPMyAdmin 3.0.2 (5.3 Thread Safe) with the most modern features. Compatible with most PHP Frameworks: appserver.io Community Edition is compatible with all major PHP frameworks. PHP Framework Integration: appserver.io is built on an Apache 2.2/PHP 5.3 environment with PHP

Frameworks Integrations. On Demand Port 8080: appserver.io Community Edition allows you to configure and use different ports and hosts, without a heavy impact of the database. Load and Hardware Requirements: appserver.io Community Edition runs smoothly with any network hardware, but it works especially well on a high number of concurrent users. It is suitable for users who are developing e-commerce applications, social networks and content managers for WordPress. Automatic Switch to Multi-

Threaded Mode: appserver.io Community Edition switches automatically to multi-threaded operation, if any of the PHP Frameworks for the current version is in multi-threaded operation.

Persistent Database Support: appserver.io Community Edition provides the possibility to use different database servers, such as MySQL or Oracle, at the same time. Since appserver.io runs on the Apache web server, the support of external database servers is even easier.

Web Server Directories: appserver.io Community Edition

allows you to configure specific Directories such as index.php or index.htm for each and every site without a heavy impact on the database. Persistent Messages Queue: appserver.io Community Edition makes persistent messages queues possible using SQLite. Multiple URL and Home Directories: appserver.io Community Edition supports multiple URL and Home directories per site for easier maintenance

What's New In Appserver.io Community Edition?

One of the oldest and most popular languages out there, PHP is very well suited for web programming and development thanks to its integrated database support and advantages such as cheap hosting and because it is relatively accessible for beginners. Written entirely using PHP, appserver.io is an advanced and comprehensive application server for PHP development. This said, if you are a PHP developer, then you will be happy to hear that appserver.io provides the core tools and features found in most frameworks

nowadays. Evidently, one of the resulting advantages is the fact that it is way lighter than your run-of-the-mill PHP framework. Quite surprisingly, installing this server is not what you would call a challenge: simply launch its installer and in a short amount of time the server should be up and running.

Straightforward installation and a basic launch process Subsequent to its installation, you can quickly get a feel for what this server is all about by reaching the app with the help of your default web-browser. Simply type in the following address: “ or “

By entering the site, you can start creating new apps within a streamlined and web-based interface. Note that you can explore even more options by logging in with the following default credentials: “appserver / appserver.io” Easy to get started with but it does require some documentation before you can properly configure it You can take advantage of features like a multi-threading compatible, powerful servlet engine, a dependency injection container, an advanced web server with HTTP basis and

more than one persistence containers. In addition, appserver.io features a message queue system for controlling long running tasks and a time service that helps you schedule tasks. While it is not difficult to get to grips with, configuring this powerful server application does require a fair bit of documentation. Fortunately, there are dozens of such documentation sections found on the developer's website. A powerful PHP-based server for PHP web development In conclusion, you need to have at least some basic knowledge of PHP to really

appreciate an advanced piece of software that is appserver.io. Without beating around the bush for too long, appserver.io is a true statement to what the real potential of PHP is. It is designed to offer a server for PHP web-app development that should offer all the benefits of a framework but without being so bulky and without the necessity of external tools. Get the appserver.io Web Application Proxy and access to the developer

System Requirements:

Mac OS X 10.4 or later Processor 2 GHz Memory 1 GB RAM Graphics 128 MB Hard Drive 30 MB free hard disk space Video 128 MB or greater, with 32 MB of video memory Screenshots To access the application launcher, simply double-click on any of the icons on your desktop. Or use the icon in your Dock. For more details, please refer to the help menu. If you have any problems in using SplashUp, please refer
