Protocols for a number of related software packages In addition to programming languages, AutoCAD supports a number of network protocols that enable direct access to the application. Autodesk Exchange Protocol (AEP) is a Java API that includes access to AutoCAD's database and a data transfer protocol that allows the loading and saving of drawing files from a network in exchange format. Autodesk Forge Protocol (AFP) is a general purpose protocol for the exchange of information between different Autodesk software applications. In the autocad 2014 panel, in the top menu, click the "File", then the "New" button, then "Presentation". In the window that opens, choose "Add media", then choose "Open document". In the "Choose a template" window, choose the "Presentation template", then click "OK". Close the template, and save it as "CADTemplates.dwt", open it and make sure it contains all the layers you need. Before: Before activating the key, go to "Preferences" > "General" > "Reset" and confirm your email, then click "OK". After: After you have activated the key, go to "Preferences" > "General" > "Reset" and confirm your email, then click "OK". There are two ways to do this. The first is by using the JavaScript function `change()` which you would apply to the respective divs inside your HTML and the second is using the `Jquery.css()` function. To make the second method work, you need to add the following JQuery javascript to your site's HEAD tag: `$(document).ready(function(){ $("#yourdiv").css("border","2px solid red"); });` This will add a border to your div with id "yourdiv" when the page is loaded. In the example above, I called the function immediately after the page was loaded so that the div is already loaded and ready to receive the border. If you choose to use this method, you might want to make it so that the border appears only when the page loads. You can do this by appending a JavaScript statement to the end of your div. To put it another way, you could think of it this way:

```
$(document).ready(function(){ $("#yourdiv").css("border","2px solid red");
$("#yourdiv").css("border","2px solid red"); });
```

If you are going to use this method, you should realize that once a div is given a border, it will retain that border no matter how you interact with it. For example, if you use the first method mentioned above, and you want to remove the border, you would need to use the `.css` function again to do so./* * Copyright (c) 1997, 2014, Oracle and/

If the receiver clicks a button or touches an on-screen element, the receiver's feedback will be incorporated into your drawing. This is a major advancement in design review and helps you to incorporate and accept feedback much more quickly and accurately. (video: 6:00 min.) The new ribbon import system dramatically reduces the number of clicks needed to create a drawing with AutoCAD. (video: 1:50 min.) New style control. The new style control allows you to move, resize and edit the style of objects in your drawing with one click, while applying the new style immediately. (video: 2:40 min.) Print Preview: Get feedback about your drawings before you commit to them. Print a representation of the drawing that you can annotate, and have the new print preview feature instantly apply any annotations to your print. (video: 2:45 min.) New Face Style controls: The style controls that we have used to style the faces on our models since AutoCAD LT 12.0 are now available in AutoCAD. (video: 1:50 min.) Improvements to Layers: The Layers window now displays the current layer at the bottom of the window. The current layer is the layer that is displayed in the window. There is also a new Layer menu to select the current layer. (video: 1:35 min.) AutoLISP enhancements: Make menu changes when using the LISP editor. Changes to the menu structure are now reflected in LISP. (video: 2:30 min.) New Shape Mode: The new Shape mode is for editing dimensions, areas, and bezier curves, but does not include trigonometry. New Vector Shape Mode: The new Vector Shape mode is for

editing line, arc and ellipse vector curves. **New Cut Plots:** Create cuts for a plot. Add marks and views to a plot to find the cut points of the plot. (video: 1:45 min.)

QuadFinder: QuadFinder is a feature to help you locate the 4 vertices of a

quadrilateral. **Improved Layer Management:** New layer management functions.

Improved Zoom Levels: Provide zoom levels for the drawing canvas and printer controls. Zoom out to the 1:

Windows 7 or higher Mac OS X 10.8 or higher Intel or AMD processor 2GB of RAM
4GB of RAM for Mac OS X NVIDIA GPU with compatibility with PhysX Intel Core
i7-3960X (6 cores @ 3.5 GHz) or AMD equivalent 16 GB of RAM for PhysX 8 GB
of VRAM for PhysX Standalone Windows version: Intel or AMD processor
