The boy, who was not an immediate threat to anyone, was lying on the ground when he was shot in the chest by an off-duty police officer, Jermaine Givens. Police say Givens believed Hernandez was involved in a neighborhood dispute and was “attempting to conceal himself.” The officer, who had no warrant for his arrest, fired two shots from his department-issued handgun. Givens was working off-duty that afternoon, and was previously a L.A. County Sheriff’s Department deputy. His brother, Lawrence, was serving as a private security guard for the apartment building’s manager that day. Police say Lawrence confronted Hernandez as he was climbing over the wall. Witnesses say Hernandez stopped short of the second-story apartment and asked, “What’s up?” He made no threatening move, though one neighbor said Hernandez had a BB gun in his pocket. Givens later claimed to have shot Hernandez in self-defense, but L.A. County authorities ultimately refused to press charges against him. The city attorney claimed Givens was exercising “good faith” but was probably mistaken in thinking he was defending himself from an imminent threat, and it was

This video shows the ability to import drawing information from a PDF or paper source. The drawing information can be added directly to your drawing without additional steps. The information can include text and drawings from the paper. In the following video, we’ll look at how to import symbols from an external source into a drawing. There is a faster way to import symbols from an external source than the standard way. Graphics and Drawing: Create realistic metallic materials for 3D objects. (video: 1:34 min.) In this video we’ll see how to add a metallic sheen to 3D objects and change color and reflectivity values. This is the default appearance for objects on a flat background, such as walls, floors, and ceilings. We can change the appearance of 3D objects on a flat background by using the Appearance tab. Simplify complex surfaces using a new parametric method. The new method creates surfaces by merging different polygons with one or more curved segments. (video: 0:39 min.) In the following video we’ll see

how to simplify complex shapes using the new Parametric Merge tool. The Parametric Merge tool simplifies polygons by merging them into curved surfaces. You can use the TIN (Triangulated Irregular Network) method or the SMOOTH method. Paint 3D models with depth. Use the 3D paint bucket to paint 3D objects. (video: 0:39 min.) In the following video we'll see how to paint 3D models in 3D view. We'll use the 3D Paint Bucket to paint 3D objects on the model's background.
