I've been thinking about what I want my new line of business will be. I really don't want to end up doing either of the traditionaly 'bad' type of business or the 'good' business. I'm thinking of something between the two, that will grow, but not get so big that it can't get any support. As I thought it through, I realized that the perfect business would involve buying some land or other real estate to set up a mobile self-defense training facility. Like I said, I'm not talking about doing a 'good' business. What I mean by 'good' is that the project would only take me about 1-3 years. Then, once I had the facility up and running, I'd be able to sell all the self-defense training classes, and the basic training materials used by the facility. A more 'good' type business would involve providing the service as a franchise opportunity, but again, my facility wouldn't be on the high-end like this, so my business would be geared towards supporting the business of others who were more high-end. So anyway, I started thinking about the best way to go about this, and how I would get there. At first, I thought it would be best to buy a few acres of real estate to put up the facility, and then sell the classes to individuals who needed them. That way I'd have a way to keep the monthly bills low (even though the land would only cost me a few hundred dollars an acre), and then I'd have the benefit of having self-defense classes available for free. Then I thought about how people are not motivated by the fact that they have to pay in order to use something, and that the real appeal is to me how rewarding it will be to help people. To me, that's like the ultimate reward that everyone has the desire to reach for. So, I decided the best way to go about it would be to have people pay for the classes, but I'd make the classes free. I think that would work out great. I have a bunch of military and police clients that are interested in this, so I'm thinking I'd actually have a good group of people who would be interested in the classes. That way I'd have a captive audience of people willing to buy my classes, so I could keep my price low, and I wouldn't need to worry about competitors trying to out-bid me. Then I'd just
