Ad AutoCAD is a program that can be used for many different types of projects. You can use it to model anything from a house to a complete airplane. There is also a wide range of pre-designed templates and shapes you can add to your projects, allowing you to create your own custom templates. Unlike many other programs, AutoCAD does not require a user to learn how to use a mouse and type in commands. Most of AutoCAD's functions are accessible by means of the keyboard and mouse, or with the onscreen drawing tools. To help those who do not use computers for a living, AutoCAD comes with an easy-to-use User Interface (UI), which allows users to quickly and easily learn how to use the program. Ad Although CAD programs are generally used for professional purposes, AutoCAD offers a number of options that can be used for simple projects. AutoCAD has a very user-friendly interface, making it easy to create a whole range of different projects. Ad AutoCAD is a registered trademark of Autodesk, Inc. Many of the functions in AutoCAD are related to the field of architecture and construction. Email Share 98 Shares Three U.S. senators introduced legislation on Wednesday to create a "physician-led" cannabis research program, proposing to spend about $25 million to develop a plan to evaluate the impact of medical marijuana on various conditions and outcomes. In a statement on the measure, Sens. Jeff Merkley (D-Ore.), Cory Booker (D-N.J.) and Kirsten Gillibrand (D-N.Y.) said the research plan is designed to assist the Food and Drug Administration in its review of marijuana for the first time. "The American people are calling for researchers to study the role of medical marijuana in treating serious and debilitating conditions," the senators said. "Our legislation will provide a path forward to do just that — a path that is focused on conducting research that is widely-accepted and scientific, helping scientists and patients alike." The group of senators' proposal comes as the FDA in the past year has taken steps to approve medical marijuana under its authority, including using a data-sharing agreement with the National Institutes of Health to allow researchers to study how cannabis might impact certain outcomes. The U.S. Attorney General also in the past year took the first steps to declassify marijuana as a Schedule I drug, the most restrictive classification, along with heroin and LSD. The DEA has since moved marijuana to Schedule II, alongside the likes of oxycodone and morphine. In their proposed legislation, the senators said they want the plan to be overseen by the National Academy of Medicine, a professional society that was founded in 1915 to promote the practice of medicine. The academy in recent years has also been active in studying the effects of cannabis and marijuana. The U.S. Senate in July approved the "Medicinal Cannabis Research Act," sponsored by Merkley and Sen. Ron Wyden (D-Ore.) that would provide federal funding for medical research on the cannabis plant. Merkley, Booker and Gillibrand are pushing the measure as part of a larger effort in Congress to get the FDA to approve medical marijuana. The three senators have introduced legislation to that end on two separate occasions in recent years. Efforts to legalize cannabis for recreational use by adult consumers in states including California have also gained support in Congress. On Wednesday, a group of 29 House lawmakers introduced a bill that would legalize marijuana and end federal restrictions on the substance. In

If we assume that there exists a, b, c such that $a^2+b^2+c^2=2abc$ with a, b and c being even integers, then a, b and c are even integers. Now $a^2+b^2+c^2=2abc\geq 4$ and hence $a^2+b^2+c^2=2abc\geq 4+4=8$ which implies that a, b and c are all greater than 2. If we assume that there exists a, b and c such that $a^2+b^2+c^2=2abc$ with a, b and c being positive odd integers, then a, b
