The Foreign Office said it was
"deeply concerned" at the killing of
Hassan Mustafa al-Shamiri in

Baghdad and added that a British man who also died during the attack was a police officer. The statement said: "The British man was named as PC David Curtis who was killed when a suicide bomber driving a car detonated his explosives in the east of the Iraqi capital. "Both the FCO and the Metropolitan Police are providing the assistance of consular staff to the family of the man, who the FCO understands to be a British national." Mr Shamiri's body was discovered in a flat in Baghdad's Shorja district, in the Shia Muslim holy city of Karbala. A second

fatality was also reported in the attack, which also wounded at least 20 people. The Foreign Office said it was in contact with the Iraqi authorities and was urgently seeking more information about the attack. The British national who died in the explosion is understood to be a serving police officer with the Metropolitan Police. A Foreign Office spokesperson said: "We are deeply concerned to hear of a reported attack in Baghdad today which has claimed the life of an innocent Iraqi man. "Our thoughts are with the man's family and

friends. We have made enquiries to learn more about the attack." A security source said Mr Shamiri

Re: 09' F-150 and the feeling of being "strapped in" I also feel like the front seat is really just thrown into the mix and we're supposed to play along. I think I'm in the minority in that my back seat is where I want to sit, but that's because I use my car for work and I like being able to easily get to my office or the garage. I have my seat adjusted and I love it. I also have a recliner in the back and a couch in the front, and I've never had any issues with the back seat. One more

thing, in my limited experience, I know that there are some softer seats out there. I find that just about every vehicle seems to be made of hard plastic or metal, or a bit of both. And I've always found that with upholstery that's not been properly installed, it's not really good for your back. The problem with back-up cameras, in my experience, is that they don't seem to work well in parking lots. It's as if the cameras are focused on the car and if the camera isn't pointed to where you should be, there's no feedback that you have done something wrong. The video

below should prove that point. Re: 09' F-150 and the feeling of being "strapped in" Lonnie. My wife and I just drove a 2012 Ford F-250. It has the F150 seat back. We drove her F-150 everywhere and loved it. She really wanted a second pickup and had some issues finding something to suit her needs. We both agreed that the seating arrangement on the passenger side was great. We have children and always liked the extra room and thought it was a good choice for the kids. I looked for a 2012 F150 in her price range with a cab so we could look at the seats. We

found a Taurus that was much larger and had harder seats. The Taurus had the nice soft seats and she opted to stay with the Taurus. For the F150, I am sure the cushioning would be much firmer and possibly uncomfortable for a long trip. Re: 09' F-150 and the feeling of being "strapped in" As per the other post,
