AutoCAD has three main components: Design and modeling - This is the core application and is what creates the drawing objects that make up the final drawing. Drafting - This is the software that allows you to draw, layout, view, and manage the drawing in context. All-in-one - This provides integration with other AutoCAD programs and is used for exchanging data, retrieving data, and sharing files with other programs. Use AutoCAD to produce architectural, engineering, mechanical, and structural drawings that are used in a variety of industries and professions. This includes buildings, bridges, highways, railroads, ships, airplanes, and other structures. AutoCAD has a robust feature set for architectural design that includes project-based, resource-based, and tool-based environments. AutoCAD provides several types of views for drawing: 3D layout 2D layout 2D schematic 2D drawing 2D edit Viewport See Drafting Views for additional drafting views. Use the 3D modeling tools to create a 3D model of a structure, or work with a 2D model to make a 3D representation. You can use 3D modeling to make 3D views of any 2D model, or you can work on a 2D model in a 3

Q: CakePHP 3 : Select and save I'm creating a CakePHP application with multiple scenarios. I'm using the default User model for authentication and authorization. I want to use a hasMany relation with users to my conditions (which I already did) and as a bonus have a calendar for each user to schedule meetings. This is my Controller: public function index() { \$conditions = ['User.authorize' => true]; \$this->paginate = ['User.id' => \$conditions]; \$this->User->unscopd(); \$this->set('users', \$this->paginate('User')); } And this is my view: Form->create(null)?> Form->control('User.id', ['class' => 'form-control', 'type' => 'text', 'id' => 'id'])?> Form->control('User.name',

What's New In?

You can now draw and paint directly on any live Surface object, including those created with the new Paint tools in the Surface Design workspace. For example, you can draw a blue line over a red line to see how the colors combine. (video: 1:50 min.) You can also see your current line or area color when you start your Paint tools or draw with the Rectangle tool. You can now use color fills to represent structural and aesthetic surfaces in your design. (video: 1:17 min.) You can now export models from AutoCAD to other programs. (video: 1:50 min.) You can now place an Inverse Z Edge or Face option to the Right/Bottom/Left/Top Face when you're using the Face tool. This gives you extra flexibility in your drawing. You can now use the Surface Design tools to create and edit 3D surfaces and solid models. (video: 1:58 min.) Creating User Libraries: Creating custom user libraries that allow you to easily move or copy parts or entire models among projects is easier. Just place the library on your computer desktop and name it. (video: 1:10 min.) You can now create standard parameterized drawings quickly using libraries instead of recreating them over and over. (video: 1:18 min.) You can now open and work with a library on your computer while connected to the Internet. (video: 1:26 min.) Suppressing or enabling a library on your computer is now easier than before. (video: 1:28 min.) See the Content Center for details on the options. Drawing Intersections: You can now work with intersections in 3D drawings more efficiently. When you edit an intersection, the intersection splits into two lines. You can click to reconnect the lines into one. (video: 1:25 min.) You can now choose the intersection line that you want to intersect to create a spline. When you create a spline, the intersection line becomes a closed spline. (video: 1:48 min.) The On Face and Off Face options are new for surface selections. This makes it easier to select the face you want to use. (video: 1:25 min.) You can now select a surface from a 3D model. (video: 1:28 min.) Creating Blocks in Drawing Pages:
