BOOTSAVE.EXE is a small application that will save the boot record of your hard drive on the same device it is installed on. The boot record is the small portion of the boot disk that gets loaded into the memory. It then locates and loads the OS into memory, from which you can boot the system. Like Bochs, BootSaver does not need any operating system to run, as it has a special program that can directly access the hard disk boot

device. This tool is very useful to have around, even if you are only running Linux, because even after a hard drive failure, it will allow you to boot to a rescue CD, a live Linux operating system, or a fully-operational Windows system. You can save the boot record on the hard drive (even if the OS is currently running), and you can reload the saved boot record on another hard drive in the same computer. BootSaver usage is similar to that of Bochs. It has only a few command line options

that you will need to use if you wish to save the boot record.

BootSaver Features: Save the boot record on the same hard drive you are running on You can save the boot record on a different hard drive if desired Load a saved boot record on another hard drive The saved boot record can be loaded on the same or another hard drive You can choose which hard drive to boot from You can load and save boot records on any hard drive **BootSaver Features:**

Advanced Interface Save and load

boot records Boot from different hard drives You can choose boot from the hard drive where BootSaver is installed or from the one that contains the saved boot record You can load a saved boot record from any hard drive Bochs, BootSaver and Speedfan Control You can use this program to control Bochs, BootSaver and Speedfan. Supported Devices: - Device type BOCHS - Device type BOOTSAVER - Device type SPEEDFAN - Device type SELFRECORD - Device type

SOFTSAVE - Device type
SPIRECORD - Device type
BOOTSUPDATE - Device type
CPLUSPLUS - Device type
OPTION - Device type
SPIBENCH - Device type
SPIBOOST - Device type
BOOTBOT - Device type
BOOTREADER - Device type
BOOTFACTORY -
