Overview of AutoCAD First, we discuss AutoCAD's basic features, including its unique user interface (UI) and its many features for creating 2-D drawings and for creating and editing 3-D objects. Then we discuss its data formats and object, drawing, and display features. The remainder of this article covers detailed features of AutoCAD, including its drawing and editing features. Basic Features After launching AutoCAD, the primary interface is a computer screen. The screen is divided into three panes: the application window, the drawing window, and the viewport. The Application window is where you can open drawing and data files, create new drawings,

and access the Help Desk. The Drawing window is where you draw new and modify existing drawings.

The Viewport displays the drawing area. The drawing area includes a drawing region and, under certain conditions, a viewing region. The drawing region is where you draw. The viewing region is where you see other parts of the drawing. While the main screen is active, the application window has several tabs (or buttons). These include: The Viewer tab has the options for scaling the drawing and viewing area. You use the Viewing Scale tool to enter values for the X and Y scaling factors. The Drawing Scale tool allows you to enter values for the X and Y scaling factors. You can zoom in and out, with the Zoom tool, and you can pan around the drawing area, with the Pan tool. A closer look at the Viewing Scale tool: [View image \(view large version\)](#) The Render tab lets you choose various rendering options. You use the Drawing Preview tool to view the drawing on the screen. The Preview Zooming tool allows you to enlarge the drawing area so that you can see more of the drawing. You can also use the Preview Toolbar to control the preview tools and to access the AutoCAD

Help Desk. The Theme tab lets you apply themes and change the background color. The Refresher button refreshes the drawing area to make sure it looks as you expect. The Drawing window is where you create new drawings and draw existing objects. You start a new drawing by choosing File⇒New. You can type a file name in the Name field and use the File Open dialog box to locate and open a file. To start a new drawing
