"Keyboard macro recorder" that records every keystroke of the keyboard and automatically plays them back when you start your computer. iTunes can't stop consuming data, a new FixmerkTV.com test reveals, taking down the average user's bandwidth by 40 percent and increasing their data usage by 38.7 gigabytes. FixmerkTV.com has recorded all sorts of data consumption tests in the past, but this time it is looking at iTunes. The results of the latest test suggest that the iTunes application is the most resource-hungry app on an average user's desktop, "consuming roughly 80 percent of the bandwidth of a typical desktop computer, and 40 percent of that of a laptop" according to the site. While the figure seems staggering at first, it is rather low compared to some of the other programs tested. Some of the tested programs recorded up to a 200 percent increase in usage, such as

MacFolders and Windows Live Writer. The site also noted that many users find iTunes to be their biggest data hog, with users claiming iTunes “uses up to 1.5GB of data a month, or more than 50GB of data a year.” The site explains that you might be able to reduce your data usage by removing iTunes, but “you may want to keep it around” in order to sync with the AppleTV. “Your iTunes library is very important to your iTunes experience,” explains the site. “If you’re syncing with the AppleTV, as most users do, you may want to keep iTunes around, and using it.” FixmerkTV also noted that “iTunes 7 does add a bit of a wrench into the works when it comes to syncing music with AppleTV, but it’s easily resolved.” The latest test also found that Windows Live Writer wasn’t as resource-intensive as it was in the past, with average data usage dropping to “an impressive 28.7GB” from 50GB in the previous test. FixmerkTV has recorded and published all sorts of data usage tests in the past, including programs like MacFolders and iTunes. The site has also tested new applications, like Facebook and BlackBerry Messenger. 1d6a3396d6

iriverter is a personal tool that converts different audio and video file types to your own device's format. It is absolutely free to use with no limitations. More than that, it has no installer or setup process, making it easy to use. iriverter has three different conversion modes: Single, Folder, and DVD. The first one allows you to convert a single file in order to output it directly to your multimedia player. You can also choose to use folders or even entire DVD movies, which makes it possible to join and export different video files. More than that, there is also an extra tool that splits a video in multiple sections. Lastly, the DVD mode lets you export the output in several different folders and formats. Iriverter includes 16 conversion filters which should be enough to satisfy all your needs. You get to decide the video and audio format you want to output in. It's quite straightforward because it uses pre-configured presets. What's more, you can manually adjust various quality options for all your audio and video formats. iriverter doesn't need to mess with codecs, so you can convert files without requiring an additional application. It supports almost all formats for audio and video conversion, including MP3, WAV,
