Gastrointestinal stromal tumors of the esophagus: a comparison of the prognostic features of spindle and epithelioid subtypes. Gastrointestinal stromal tumors (GISTs) are rare and may arise in the esophagus. However, no comparative study of the clinical and pathological features of spindle and epithelioid GISTs of the esophagus has been reported. We reviewed the clinical and pathologic features of esophageal GISTs from a single institution to provide insights into the pathogenesis, clinical diagnosis, and treatment of esophageal GISTs. Twenty-three esophageal GISTs from 17 patients were analyzed. The patients included 14 men and 3 women (mean age, 68.6 years; range, 46 to 80 years), including 6 with spindle-cell GISTs and 17 with epithelioid GISTs. Of the 14 patients with spindle-cell GISTs, 5 (35.7%) had locally recurrent and metastatic disease, and 2 of these 5 patients had died of disease. Of the 15 patients with epithelioid GISTs, 1 had locally recurrent disease (6.7%), and 5 of the 15 patients (33.3%) were alive with metastatic disease at the last follow-up. The histologic subtype and mitotic rate were significantly different between spindle and epithelioid GISTs ( $P = .001$  and  $.02$ , respectively). There was a significant difference in the prognosis between the 2 groups: spindle cell GISTs had an unfavorable prognosis and epithelioid GISTs had a favorable prognosis. Esophageal GISTs of the spindle cell subtype carry a worse prognosis than those of the epithelioid subtype.

Bifidobacteria inhibit Clostridium difficile in the murine gut microbiota by producing androgens from conjugated linoleic acid. The gram-positive anaerobe Clostridium difficile is the leading cause of antibiotic-associated colitis. We hypothesized that bifidobacteria are antagonistic to C. difficile in the gut microbiota through production of conjugated linoleic acid (CLA), which suppresses C. difficile toxin production and toxin-mediated growth in vitro. We determined whether CLA production by bifidobacteria contributes to inhibition of C. difficile in the gut microbiota. Bifidobacterium animalis subsp. lactis C
