Free Face Off Maker is an interactive graphic editor built specifically for helping you generate amusing pictures by transposing any face to another body. It sports a clean and intuitive layout that allows you to configure the dedicated parameters with minimum effort. The program gives you the possibility to choose between various preset background photos with depict celebrities and upload an image (JPG file format) from the computer that preferably contains a face. What's more, you are allowed to crop the image using your mouse for selecting the desired area, move the face until it perfectly fits the other picture where the face is transposed, as well as resize the cropped face. Free Face Off Maker enables you to rotate the photo to different angles, adjust the brightness, gamma, saturation, contrast, and hue, reset the current settings with just one click, as well as apply special effects (e.g. grayscale). Last but not least, you can preview the changes made to the pictures, zoom in or out, undo your actions, switch to a full screen mode for a better focus on your work, and save the edited picture to JPG file format. During our testing we have noticed that Free Face Off Maker carries out a task very quickly, provides good image quality, and no errors showed up throughout the entire process. It is quite friendly with system resources, so the overall performance of the computer is not affected. All in all, Free Face Off Maker offers a handy set of parameters and an intuitive layout for helping you create amusing pictures, and is suitable for all types of users, regardless of their experience level.

The present invention relates to the field of electronic data processing, and more specifically, to facilitating access to a resource in a computer system. Generally, a resource accessor function accepts requests for access to a resource in a computer system, and grants access to the requested resource. Typically, a single process or application owns the resource accessor function, and it is associated with the single process or application. Typically, the process or application requests access to the resource from the resource accessor function using a request, which is in the form of an accessor function call. The process or application does not own the resource.

1. Field of the Invention This invention relates generally to an electronic interface for connecting an integrated circuit chip to an external circuit, and more particularly to an interface for directly interfacing a plurality of integrated circuit chips to a common external circuit and including means for maintaining the signal transmission path to the common external
