\* \*\*Adobe Illustrator:\*\* Adobe Illustrator is designed for professionals and is far more visually oriented than Photoshop. It has a hard-edged, flat-style look that emphasizes detail, shape, and geometric drawing, color, and outline. Illustrator is a vector graphics program, meaning that it creates objects by taking a drawing and simplifying the strokes into points, lines, and curves. Illustrator uses a layer-based editing system that enables you to place text, shapes, and images on a single layer. You can modify and transform the artwork on that layer. Illustrator offers traditional drawing tools along with tools for drawing freehand, sketching, and drawing lines, circles, and other shapes. It also offers features that allow you to create and edit paths, which are visual representations of drawings. You can place text along, or under, any of these paths. Because Illustrator is primarily a drawing program, you can't really use it for photo retouching. You can use it for creating editorial graphics, logos, typography, and other design-oriented images, but it's not a camera-ready program. Instead of the crosshairs, you use guides to apply a digital vector watermark to an image. (Chapter 13 covers Adobe Illustrator in detail.) You can use Illustrator to create lines and shapes, clean up photos, add text, and add other graphics. \* \*\*Adobe Flash:\*\* Adobe Flash is a program designed to create video and animation. You can use the program to create animations, web

pages, and live-action videos, such as your own YouTube videos, that are displayed on a web page. You can also create ad campaigns for the web. Flash is not a photo-editing program, but it does allow you to add effects to your image.

You can use it for simple retouching and basic image editing. You can download a free version of Flash from its website: [www.adobe.com/cfusion/](http://www.adobe.com/cfusion/) (see Figure 6-22). **Figure 6-22:** You can use the free Flash editor, which is part of Adobe's Creative Cloud, to produce short animations and short web pages. Figure 6-23 shows an example of a simple image I retouched using Photoshop. Figure 6-24 shows a sample of a complex web page (one of many different pages you can create with Flash) that I created using the free

There are 4 main image editing features in Photoshop Elements. They include editing, retouching, creating graphics and designing. Users can add effects like filters and textures to give an original photo or design a unique new look. After editing the images, Photoshop Elements users can save their creations to a computer or to the Internet. They can also output the images on to a personal image printing service, a digital camera, a T-shirt printing service, and others. This tutorial will teach you how to create a natural looking sky. The sky is one of the most difficult to edit images in Photoshop. We will use the Photoshop Elements to create an elegant starry night sky. Tutorial Details This Photoshop tutorial requires no specialized skills or training, but will take you through the steps to create a natural looking sky. Steps 1. Open the photo and place the Selection Rectangle Tool over the area you wish to use for the sky. 2. Click on the Magic Wand Tool and click on the sky area you wish to make a selection for the sky. Make sure you choose the sky area carefully. 3. Using the Magic Wand Tool, select the area you want to be white. 4. Choose None in the Transparency Panel and click on Remove. 5. Click on Adjust and desaturate the image. 6. Add a layer mask to the sky layer. Using the Rectangular Marquee Tool (M), you will be creating a circle around the eyes. 7. Click on the Add Layer Mask icon and click OK. 8. Change the style of the Add Layer Mask layer mask to the Dodge pencil. 9. Click and drag over the eyes to change the shape of the circle. 10. Click on the box with the Star in it on the Add Layer Mask. 11.

Change the Face type to 3D Face by clicking on the arrow to the right of the Star. 12. Make sure you have the Star layer selected. Click on Reverse Source. The 3D face will fill the circular shape of the eyes with the face looking away from you. 13. Click on the Arrow to the right of Reverse Source and choose the word Inverse. 14. Check back on the Add Layer Mask layer. The stars will now be facing the front of the image. 15. Select the Eyedropper Tool and click on the star you 05a79cecff

# **Layer Styles** The Layers panel provides an easy way to change the appearance of objects in your image, including colors, textures, and styles. This is a great way to change the look of one layer in your image without having to redo the whole layer. **Fig. 5** : The Layers panel To add a layer style to your image, select the brush or pen tool, then click the Layers panel to select the layer style. Click the layer to create a new style. Figure 5.9 shows you how to create a paint effect style on a layer. You can add three

The kinetics of non-linear gating of K<sup>+</sup> channels in cell-attached patches from GH3 pituitary cells were studied with 14 mM K<sup>+</sup> as the test ion. When intracellular GTP was 0.4 mM, the channel was fully activated by stepwise changes of K<sup>+</sup> concentration at a holding potential of -20 mV. This result was obtained by raising the free Mg<sup>2+</sup> from 1 to 1.5 mM. With higher free Mg<sup>2+</sup> (greater than 3.3 mM), the channel was almost independent of Mg<sup>2+</sup> and activated in a voltage-sensitive manner by stepping the test potential from -60 to -20 mV. In the presence of 2 mM GTP (or GTP- $\gamma$ -S) and 15 mM Mg<sup>2+</sup>, the time course of activation in response to a stepwise change of K<sup>+</sup> concentration was faster, and the channel was not fully activated when the depolarization was stopped. This is consistent with the fact that the channel is kinetically coupled to G-proteins. The kinetics of inactivation were investigated by using the same protocol as that for activation. With low Mg<sup>2+</sup>, the channel inactivated in a voltage-sensitive manner. With higher Mg<sup>2+</sup> (greater than 3.3 mM), the voltage-sensitive inactivation was almost absent. The non-linear gating

was suppressed by guanosine diphosphate in the presence of 2 mM GTP or GTP-gamma-S. These results suggest that the channel is regulated by G-proteins. Prosecutors say the former captain of the Ottawa Senators was driving under the influence and had a blood alcohol level more than twice the legal
