Browsers may be stand-alone applications, or they may be part of AutoCAD and other applications such as Microsoft Office. Some AutoCAD features are only available when browsing, and cannot be used in a drawing when the drawing is created. Browsers are used to browse files and to view and select objects in the drawing. Web browsers can be used to browse drawings, and they are used to create drawing files. In AutoCAD 2006, the browser was an important component of the drawing environment. In AutoCAD 2007, the browser has been integrated with the Drawing Control Block (DCB), which provides a more comprehensive and convenient drawing environment. Drawing tools As AutoCAD includes more features and becomes more powerful, it becomes necessary to provide a means to interact with the drawing. Drawing tools are a set of routines and methods that allow the user to add to and manipulate the objects and paths of the drawing. Objects and paths can be selected by many different methods, including through the use of a mouse or by using an object's layer. AutoCAD supports a number of different ways to manipulate or draw objects.
