You play on a dynamic, yet static world. It's always there, but can be configured in any way.

Persistence lets you handle your worlds like a general, and not like a specialist with his own particular tools.

Completely dynamic to the complexity you feel **the world** to be, it does not matter which presets you use. The history of your changes to the world can be saved and reloaded later.

By the way, it is also the first card game that was licensed by Bethesda, so we have been kept wondering if it will be a blessing or a curse. After extensive testing, I am quite sure that it is the latter, and even it got what is the best among other TCGs. Of course, there are a few things that I really liked from the very beginning.
