## Mp3AlbumManager Crack

Mp3AlbumManager is the end result of the frustration to create a database to easily manage a large collection of MP3 files. An embedded database (which avoids the access to the hard drive in order to save disk space) and an HTML documentation allow you to make up lists directly on the web page. A musician, DJ or record label can use the album manager to quickly create lists. You can do all these things from the album manager itself :

- Loading an import file that contains a list of files into the database.
- Adding a track that has been already created in the web site.
- Perform a batch-import of all the tracks in the list (undo/redo capabilities)
- Perform a batch-export of all the tracks in the list (make a backup of the list first).
- Easy list navigation through the files.
- Marking a file to be imported (auto-update feature)
- Playback features with different graphical representations (list, tree, n-th frame)
- Perform a batch-delete of the files.
- Perform a batch-rename of the files (undo/redo)
- Search function (fast multi-track search)
- Generate an index of the XML file to
