Q: adding page break in email html file using notepad++ How do I add a page break in the email html file using notepad++ I was thinking, I'd add a blank line in the end, by pressing "Enter". I tried adding at the end of the message, but it did not work. The showed up as in html code. I have tried searching

but could not find the answer. A: You can just add a new line , but you must have a line break first, so it won't work if there is text in the file, as will be a new line which adds to the previous text, and not a new line. To add a line break, you must make sure the cursor is on a new line, then either press enter or ctrl+enter. If you are already at the end of the line, pressing enter will add a blank line. Hey! I was wondering if you could give me some information on how to file a pay stub for an employee who has worked in Enron for 3 months to 6 years. I need to make the adjustment for any bonus they earned. Could you also please tell me if you have a software program that I could download to make this process easier.
