USB Flash Security Description: USB Flash Security Description: Features: Keep all your data safe with a password-protected USB Flash drive. Block input and output. Lock automatically. Stop USB Web serving. User-friendly. High compatibility with PC, Mac and mobile device. USB Flash Security Description: Enhance your security: Easy to lock and unlock with a password. Automatic unlock when you plug in the USB Flash. Lock automatically when USB Flash is not in use. Simple to install and use. Simple to share data with everyone. Protect multiple USB flash drive at the same time. High compatibility with PC, Mac and mobile device. Pros: Keeps your data safe with password-protected USB Flash drive. Single control remote USB Flash storage. Can support multi-user mode. **USB Flash Storage Device / USB Flash Drive / USB Flash/Pen / USB Flash Sticks -Keep Your Data Safe** USB Flash drives are tiny, simple to use and virtually indispensable. But they're not just for storing files on your computer. They're also great for making sure your valuable content is safe. **-Simple Multi-User Safe Storage** You can use your USB flash drive to protect your files by giving other people access to data that you want to share. Simply keep all your secret content encrypted (very important) and, when you give the USB flash drive to a friend, password protect it. **-Secure Permissions** Password protect your files so that only the people you choose can access them. You can also allow the entire drive to be read by everyone, or even password protect the entire drive so that even your computer can't access the files. **-Password Protect Your Drives** No more losing your USB flash drive or recycling disks that have sensitive data on them. Just use the included USB Flash Drive Manager to protect your USB flash drive. Each USB Flash drive can only be unlocked by the password you specify. **-Unlock USB Flash Drive With Password** Your USB flash drive is protected by a password. After you create one, you can use it to unlock and unlock your USB flash drive from your Windows desktop. This simple USB Flash drive manager is like you own your own USB flash drive. **-Password Protect USB Flash Drive Manager** Use this small software utility to protect your USB flash drive with a password. You will only be able to access and use your USB flash drive when you know your password. **-Password Protect**

USB Flash Security is a convenient software that turns any USB flash memory device into a self-destructing, hardware-triggered security device. When this piece of data is copied to the computer, an alert will pop up telling you to erase the storage medium, as the data has been encrypted and not stored in the default format. There is no need to worry about the sensitive information being accidentally copied or overwritten, as the data will vanish on its own once you eject the USB Flash Storage. This handy utility gives you the opportunity to steal data from insecure devices at a crime scene, without risking being detected by the law enforcement

agencies, as the USB Flash Storage is programmed to automatically self-destruct at predefined conditions. The software makes it easier to protect any type of sensitive information, such as documents and USB drives, no matter if you're at home or at the office. The USB Flash Security can be used to effectively encrypt data, and you'll be able to transfer it to any computer system, in case one drops or is stolen. The program also comes with a Windows-friendly interface that is very intuitive and user-friendly.

Setup and functionality The USB Flash Security turns all USB flash memories into self-destructing devices, leaving no trace, making it possible to travel with the sensitive data and avoid letting it be stolen by an unauthorized user or a thief. Setup is a simple process, involving selecting the storage medium to protect and defining the predefined conditions where it is to self-destruct, which may range from time to time to a pre-set temperature. The latter is determined by the power supply, which at least has an average battery life, but you may configure the condition to stop your USB Flash Security from self-destruction when its battery has less than 5% capacity. Also, the USB Flash Security will alert you when its data is copied. A three-second countdown is displayed at the top of the window and you'll have to press the 'Strictly Confidential' button in order to erase the sensitive data, but it's possible to stop the countdown before it reaches the three-second mark. Should you lose the USB Flash Storage, you'll get a pop-up message that it has been ejected, but it will automatically start erasing itself when it reaches a temperature of -55 Celsius. It's possible to change the temperature value and set a time duration before the self-destructing 3a67dffeeec

What's New in the?

This program is designed to automatically install and make sure that all the drivers and software used for the USB Flash disks are up to date. The program works with any USB Flash disks that include Linux and Windows operating systems, as well as any USB Flash disks made by any major manufacturer, no matter if they come in 2GB, 4GB, 8GB or 16GB versions.

FreeSimilar program: Besides, there are other similar programs available but they are either difficult to find or not as useful, yet. You can just click here to view all other free program similar to USB Flash Security. --..--. »
