keymaker-coreÂ .Video Tutorials 3d Paint Dual Brush Make a 3d Paint brush with some
pretty simple tools The 3d paint Dual brush is fully realized in MDLT5. In Chapter 8
Tutorial #7 we taught you how to make a simple 3d painting brush using the 3d paint in
lite. We shall now make a 3d Paint brush with dual brushes. The two different brushes are
available through the dual brush triangle. To get more information on this brush refer to
Tutorial #7 here. Step 1 - The brush setup and selection of the brush Make sure you have
set the brush to base and take the shape you want by clicking the pen button and
selecting brush shape. Step 2 - The brush sample This brush sample is created for a
bonus side effect. This brush samples could be replicated in a different type of material
(such as PS). The model is a simple sphere with a cloth on it. The model that we are
starting with is constructed via Python. The surface of the sphere is subdivided into a
number of patches using the samples operator. Step 3 - The brush stroke To create a
brush stroke on the sample make sure you have select the Vector cursor (red circle) and
click the brush button. Then select the brush from the buttons like highlighted in the
image below. Step 4 - The preview of the brush Click the preview button in the top right
corner of the brush window to see how the brush stroke looks like.
