A short description of the program is that it is a dedicated tool that helps you with the testing of a NTP server. It enables you to check information regarding the server's features, and it is very simple to use. Its help file and documentation are very clear and detailed. It also allows you to input the IP address of a NTP server, making it easy to do. Why it is important to check your NTP server's data As a server admin, or a person working with networking, you need to check if the timing is correct on your network, and keep your NTP server up to date. This is very important as

it helps ensure that the proper communication can take place and the right timings are maintained. If the data provided by the server is not correct, you could be encountering problems in one or more applications, especially when different computers (or mobile devices) are in contact with one another through the network, which could be cumbersome at best and rather impossible at worst. NTP Tool Interface: The interface is rather minimal, which means it should pose no difficulty to users who are not familiar with technology and don't always have the habit of reading instructions thoroughly. If there are any terms that are

unclear to you, you can refer to the program's help file for more information. Pros:

- Easy to use, and informative
- Detailed help file
- Easily accessible, free and safe
- Does not take up much space or make unnecessary changes to the Windows registry and system
- No change to the system's performance
- No traces left behind on the system after the removal of the NTP Tool application
- Can be run on any Windows machine without installation

Cons:

- There is a small lag in displaying results, it usually takes a couple of seconds to appear
- Does not necessarily check the NTP server's data speed
- Is mostly used for checking server

What's New In NTP Tool?

Connects to a NTP server and

displays relevant data about it, such as protocol version, modes, leap indicator, version number, root delay, precision, reference ID, round trip delay, receive timestamp and local clock offset. This software is 100% FREE, absolutely safe, easy to install, and it is supported by the Windows OS. Download NTP Tool (Win) NTP Tool (Win) Information NTP Tool is available for download from the PCGenie website, on an unconditional basis, as a portable app. The package includes a single file that has a.exe extension. This means that it can be run using most modern operating systems without any installation issues, and it does not leave any kind of footprint in

the system. Installation and system requirements It is worth noting that NTP Tool is available for any Windows OS, including Windows 10, 8, 8.1, 7, Vista, XP and 2000. Moreover, the program supports all the major and minor version numbers of these operating systems. It is important that you are aware of the fact that NTP Tool is created using the latest Visual Studio framework, therefore, you can be sure of its compatibility with all the operating systems out there. Once NTP Tool is installed, you are just going to have to follow the normal procedure. It usually consists of pressing the Windows + R keys simultaneously, and

entering “NtpServer” into the search bar in the Open Windows Menu. The application is going to open in the default start menu, and you will find it there if you are on Windows 7, 8, 8.1, or 10. However, if you are on an older operating system, you will just have to wait for the installation process to finish, which usually takes 10 to 15 minutes or so. The interface Once you have successfully installed NTP Tool, you will be met with a minimal interface, which only consists of a plain window, a box and two buttons. The left-most button is for launching the program, while the right-most one is for shutting the program. As for the box, it includes

a small list of information that you might need. Once you press this button, the program will display a window containing the necessary details. The interface is simple and plain, so it is easy for all users to comprehend what's going on. Also, if you don't like the color of the font,
