Finally, after much speculation, a ton of rumors, and a pitch by Apple, the next version of its iOS is here: iOS 5.1. After months of chugging along, available to developers for the past week or so, the new software boasts a handful of useful, but not overly noteworthy, features. The more notable changes are substantial upgrades to the Notes app, allowing users to draw on top of an iPhone's screen and more. Apple also removed the silly 3G and EDGE networks -- the former for those using some older devices and the latter for those without 3G -- and brought some features in the Compose screen to the front screen. In addition, Apple has ditched the classic iCal calendar in favor of one that's displayed in a card-style view, and offers a stock ticker of announcements so users can choose what to watch from a column of headlines. What's more, Apple appears to have tweaked its Voice Control feature, allowing users to dictate commands. The feature is still in beta and will only work with certain apps (or with newer versions of apps). Here's a full list of changes and changes in versions 5.1.2 and iOS 5.1.3, released as part of the iOS Software Update program on Friday: Notes Notes app, with new improved feature of drawing and annotating. iTunes Store New look and feel for iTunes Store.
