0ccdda8d83ddb251e35ab6e6e842a0fc I'm trying to create a list from each row using the split function, but can only seem to find the list creator for a specific column. Any help with this would be appreciated. A: You can use: import pandas as pd df = pd.DataFrame({"col1": ['a1', '2', '3', 'b', 'c', 'd'], "col2": ['a1', '2', '3', 'c', 'd', 'e'], "col3": ['a1', 'b', 'c', 'c', 'd', 'd'], "col4": ['a1', 'c', 'e', 'd', 'e', 'd']}) print (df)

col1	col2	col3	col4
0	a1	a1	a1
1	2	2	b
2	3	3	c
3	c	c	3
4	c	c	4
5	d	d	d
6	e	d	e

d from io import StringIO with open("col1.txt", "r") as infile,

---

```
open("out.txt", "w") as outfile: for row in infile:  
outfile.write(f"{row.split()} ") with open("col1.txt",  
      "r") as infile, open("out
```
