Pontocerebellar hypoplasia (PCH), also referred to as pontocerebellar hypoplasia type 2, is a heterogeneous disorder with progressive neurological symptoms and signs caused by dysfunction and/or degeneration of pons and/or cerebellum. We present a clinically and neuropathologically unique patient with PCH. The patient's neuroimaging consisted of magnetic resonance imaging of the brain and magnetic resonance angiography of the brain and spine. The patient died in her mid-40s due to respiratory failure. Neuropathologic examination revealed notable cerebellar atrophy, lack of the pontine tegmentum, and cerebrovasculature. Epilepsy was the primary manifestation in this patient, and its diagnosis was initially missed. This case expands the spectrum of PCH and identifies it as a clinical syndrome with as-yet-unrecognized causes.Sunday, August 25, 2006 To Be Continued... In my last post, I gave the premise for the new trading game I'm working on. In the first post, I described a more than thorough outline of the new trading game. In this post, I will give a summary of the mechanics of the market, and a description of the many ways that the game is designed to use its mechanics. The key to the new trading game is that the market is completely dynamic. There is no such thing as a static list of goods. Instead, the player has to consider the changing values of goods, their sources, and their desired qualities. The player does this by gathering the goods that he believes will have the most value in the future. The player then puts them into his inventory and spends them to reduce his reliance on them. The game is built on the c6a93da74d
