for system management windows 2000 introduced the microsoft management console and a vast majority of system administration tools from windows nt 4.0 were moved to mmc'snap-ins'. this includes the the event viewer, task scheduler, com+ management, group policy configuration, disk defragmenter, device manager, service control, and if installed,.net framework. two versions of the registry editor exist in windows 2000. the classic mdi-style editor capable of manipulating windows nt permissions exists as regedt32.exe and the windows 98 registry editor exists as regedit.exe. this is a straight port and is incapable of editing a remote registry or changing permissions. this was later updated in windows xp. a new recovery console was introduced which can be launched from the cd-rom (or optionally installed to disk and made available through ntldr by running winnt32.exe /cmdcons in windows). this is a text-mode windows nt (and not ms-dos as it may look) environment. most of what is built into cmd.exe, along with a set of nt native mode utilities may be launched from the recovery console. the vu meter plug-in provides the best of both worlds for your signal metering needs: analog-style vu meters (with clip indicators), and led-segment-style peak meters. vu meters are most useful for showing overall signal level, and peak meters (akin to the channel meters in the studio one console) are most useful for keeping track of peak signal levels. by referencing both of these, you can see a more nuanced picture of your signaloverall level and peak level. a stereo correlation meter rounds out the trio, giving you insight into the left/right phase relationship of your signal. this free standalone vu meter plug-in is made from the same components used in the channel strip collection.
