

## Intellitek Robocell Keymaker Extra Quality

roboCELL offers students an opportunity to write programs and test their work in a virtual robot environment. students can teach positions, write programs and debug robotic applications offline before executing them in an actual workcell. roboCELL allows students to experiment with a variety of simulated workcells, even if the actual workcells do not exist in the lab. intellitek roboCELL keymaker is a fully integrated suite of software tools designed to maximize student learning through the use of the 3d-robot modeling software, roboCELL. roboCELL keymaker is an interactive platform designed to make it easy for students to: a. write their own program and test it in a virtual robot environment b. explore different programs and interact with the robot's responses c. gain additional knowledge and practice programming techniques, as well as the use of basic programming syntax and flow control d. collaborate with other students to develop a program and test it in the virtual robot environment intellitek roboCELL keymaker is a fully integrated suite of software tools designed to maximize student learning through the use of the 3d-robot modeling software, roboCELL. roboCELL keymaker is an interactive platform designed to make it easy for students to: a. write their own program and test it in a virtual robot environment b. explore different programs and interact with the robot's responses c. gain additional knowledge and practice programming techniques, as well as the use of basic programming syntax and flow control d. collaborate with other students to develop a program and test it in the virtual robot environment e. test the robot's functions in a virtual environment

## Intellitek Robocell Keymaker

for all advanced students and it technicians, the abduction robot teaches students how to program and debug robotic systems offline before executing them in the workcell. using a variety of programming features, students can experiment with a variety of simulated workcells before working offline with the actual robot through a computer connection. roboCELL is built on the intellitek robotics software platform and is used to create and debug the robotic programs that are designed for all of the intellitek robots. in addition, roboCELL has been included in the summerworks lab class. we provide a 3d robotics simulator to you to use to test your robotic programs and programs for it's cool new features. motion path, screens and steppers: the roboCELL board provides one builtin motionpath board and one screens, and a stepper board for steppers and motion paths. all of the hardware connections on the roboCELL board match up to your machine, as shown in the below table. the table also shows the hardware connections and labels for the other connection types present on the roboCELL board. intellitek roboCELL keymaker using the software on a virtual workcell: a virtual representation of the actual roboCELL allows students to perform all of the same activities as a real workcell, but with the advantage of being able to replicate the roboCELLS physical environment in a virtual simulation. with the roboCELL, students can design their own virtual workcell, watch the robot teach its positions in the virtual workcell, debug their programs in the virtual workcell and even test their programs on a virtual robot. 5ec8ef588b
