from application root URL in Spring Boot web

application I'm working on a web application,

using spring boot and mvc. I have a static url

which I want to get to the controller as a root

url, like so: `http://localhost:8090/springmvc/`

How can I get this in my controller? I've tried:

```
@Autowired private ServletContext
```

```
ServletContext; @RequestMapping(value =
```

```
"/springmvc/", method = RequestMethod.GET)
```

```
public String home() { return "Hello World"; }
```

Which gives me this:

```
http://localhost:8090/springmvc/home A: You
```

can do it by this way `@Autowired private`

```
ServletContext servletContext;
```

```
@RequestMapping("/") public String home() {
```

```
return "Hello World"; }
```

Q: what is the concept

of a secure cloud I'm reading this article about

IaaS SaaS and PaaS and I can't understand this

statement from cloud Computing 101: with a

secure cloud, you get the greatest set of

security controls on the IT infrastructure.
