While the Apple pencil is a great tool, and should be considered, it's not the most fluid of tools. By that, we don't mean it's slow. It's light, very responsive, and easy to control. What we mean by "fluidity" is that the Apple Pencil feels like if you were using your finger to sketch on an 8.5 by 11 piece of paper. That is to say, if you approach it like a tool and not a toy, you should have no problem using it, and in some cases, like in sketching or brush strokes, is exactly what you want. Apple Macs can be a little bit of a pain if you want to edit graphics. In particular, the Mac's native desktop apps are not quite stable enough as compared to their Windows ecosystem and Adobe Photoshop for graphics have long been the standard-bearers of desktop editing for pretty much every other application. But on your iPad Pro, all of the features and workflows that you'd expect from an Adobe Photoshop are there, and mesh seamlessly with the big screen and digital aesthetic of the iPad. When it comes to editing photos on the iPad, things are a bit different. In the era of the smartphone and modern tablets, people naturally prefer to use the latter. It's how they're already used to working and, speaking of which, it's in and of itself quite convenient. The iPad Pro is the one and only tool you'll ever need, right? Navigate menus, zoom zoom, edit image, done. And it doesn't even feel like you're working on a computer. It feels entirely natural and more tactile. But it does still feel as if you're working on just a small screen, which is precisely the thing you'd want to avoid when working with a 12.9 inch (like the iPad Pro or Apple Macbook) iPad Pro. When you want to edit on a larger screen, you can of course do, however if you do, it feels rather counterintuitive.

Once you do that, you can place the types of objects you want to use for the shape, including using

the outline, and then use the options in the layer to export and save the layer so that it's an "object" in the document. If you are using more than one object, you can click on the image layer that you want to reuse, and then click on the three-Dimensional option in the color palette, which will turn them into an object. You can also reduce the size of the objects and drag them over the shape that you want to use them for. You can scale, flip around and rotate the objects to your liking. You can model them how you want. You can even adjust individual colors to any shade you have in mind. Now, many people will show you what they think this kind of shape should look like. For example, they will cut out the shapes in a layer and then fill them with a color scheme or gradients. Thi type of Photoshop cuts out the time-consuming work of having to get a new pen and paint the shape over and over again. If you have a photo editing program that can auto-trace, such as Photoshop, you can get a much better result.
