Hi, I found your review beneficial. I've been told: it is different from the app I used to buy, if only partially. the comparison is complex. I appreciate and value any kind of review where content is clearly marked. Thank you!

Ps, my app is called "Photoshop for iPad". It is not an inspiring name... I have to say this is one of the best app ever made for the iPad Pro and Apple Pencil. I use a lot my iPad Pro with the Apple Pencil and I could have never created any thing likethis with the mouse. Photoshop Sketch has turned my life easier. I can see any changes made by the paths, the opacity and the color and then I can edit it any way I want. It is so easy. If you have an Apple Pencil don't miss this app. I am trying to use a stylus in the app as a sketch book and it is so easy with this.

It is just like the pencil, I can draw with all the brushes. But what I love it is the pens, with all the different colors it is possible to create something. And all my images are saved to my iCloud library to sync with my computer later on. I just love this app, it is so easy to understand and easy to use. Somthing I love and that makes it really easy to use, is how this app is organised. I can see all the layers better and how they work, with the brushes, the layers, the options. I can see my images at the same place, with the same colour and I don´t know if there is any app that is similar. It is amazing how you can create something with a paintbrush and save it (I use headphones with a plug in them) and later when you open the file with photos you can edit it and then save it again. So easy.

Also with this iOS11 App all my apps are opened in a way that I can really see and layout. It is easy and I really love this app.
