I have not seen performance improvements. So I don't agree with the claimed improvements. On the other hand, clutter (noise) is getting lighter in my opinion. I remember Lightroom 4 was the same as Lightroom 4.3, a week after every update. Now, a week after a update of Lightroom 5.2 I see Lightroom 5.3 develop a lot. This is a good thing. **ABOVE AND BELOW:** A set of images created by the author of this ad using Adobe Photoshop Lightroom on the iPad Pro. In some cases, multiple people collaborated using the Million Dollar Project . In a recent automatic survey of users, 91% (of Lightroom's 5.6 million registered users) said they wanted "the ability to import more images" than the usual 33%. Of course, you have the same option to import more than 3000 of your existing images. Even with this massive number, you may not have the desire to import your images into Lightroom and it may be time to think about upgrading to this version. The new features of Lightroom 5, while not groundbreaking, appear to have the potential to satisfy the needs of a majority of Lightroom's user base. It could be that the smash hit of Lightroom 5 is the update's ability to import 32 GB of images whether be it from an SD card, memory card, or camera. We do not have to go into the intricacies of the 5 minute update to the Color panel. It now has a Color Guide Options and a new color control, SVG Color , that operates much like the Quick Sieve found on Lightroom 4.
