On Photoshop, there's also dramatic improvements to Select and Mask with the new Selection Modes and Mask Refinement. The new Selection Modes add more flexibility to the tool for precise selections with great speed. In addition, when you start editing with one of the new mask modes, Mask Refinement makes it easier to select objects with white edges, refine selections, remove masking artifacts, and control the quality of the mask merge. The shape tools have become even more flexible with the addition of Upright Rotation. Adobe Layer Style now allows you to create UV Map materials for all your textures. Additional content-aware tools now support many more file formats including Bitmap (PNG, JPEG, TIFF) and Vector (AI, EPS, PDF, SVG, SVGZ, and SVGZ2). And Smart Sharpen now includes Simple and Smooth (beta) sharpening options, and now also works with the new level-mapped Layers. The Tips and Tricks panel has been expanded to keep you informed on new features and updates, and with Control Points, it's easier to create unique blending effects. Possibly one of the most mind-blowing new features from Photoshop for the year ahead is the introduction of Neural Filters. It's actually a new workspace within Photoshop with filters powered by Adobe Sensei. Equipped with simple sliders, you can make magic happen such as changing your subject's expression, age, gaze or pose in the time it takes you to say "AI technology". To access Neural Filters head to Photoshop, and choose Filters > Neural Filters.
